## Working visit to the CDC and the repair of the boats that serve Regla and Casablanca.

**Language**  
English

During a working visit to the CDC S.A. shipyard, within the framework of the Higher Inspection of MITRANS, the General Director of OSDE GEMAR, Roberto Ricardo Marrero, along with a group of executives, supervised the preparations for the comprehensive repair of the boats that serve the routes to and from the municipalities of Regla and Casablanca, with the aim of ensuring safe, efficient, and high-quality maritime transportation for the population. During the meeting, the

technical condition of the vessels and the availability of the shipyard's material and human resources were evaluated, and a work schedule was established that prioritizes the prompt return of these units to active service with optimal operating standards.

This initiative, with a significant social impact, not only seeks to solve immediate mobility problems but also represents a strategic step in the sustainability of maritime transportation by extending the useful life of the vessels.
